NEVER use this tool to cut electrically live wire.
Severe or fatal injury may result.

- A. Capacity of 2.25" for the 1000 MCM cutter and 1.50" diameter for the 750 MCM cutter. Used to cut copper and aluminum only. Do not use the tool on steel or ACSR wire.
- B. If you encounter strong cutting resistance, use a one-click cutting cycle.
- C. **This tool will not operate unless the fulcrum nut is torqued to at least 15 lb-ft, so tighten when required.**
- D. Keep the blades and mechanism clean and oiled. We recommend CRC SP-350 or an equivalent lubricant.

- E. Keep the cutting edges sharp. Treat them as you would a good-quality knife. Periodically open the blades all the way and hone them as follows:
 - Stone the wiping surface **(1)** flat near the edge using a flat India stone or file.
 - Stone the 35° angle **(2)** to remove any nicks.
 - Stone very lightly on a 45° angle at **(3)** to remove any burrs.
